

[Title — state the finding as a claim, not a topic. GUIDANCE: candidate angle is Grant’s result 2 — losing a home costs years of income on top of the rebuild. Don’t lean on "hazard"/"vulnerability."]

Lessons from “The Distribution and Consequences of Natural Disasters: Evidence from U.S. Wildfire Victims” by Patrick Baylis, Judson Boomhower, Jonathan Colmer, and John Voorheis, NBER Working Paper, 2026.

[The core finding in one bold sentence.] [One or two sentences expanding on the finding and why it matters.]

BACKGROUND

[Set up the policy problem. Define any key term on first use in **bold**, then explain it plainly. Spell out agencies on first mention. End on the open question the study tests.]

[Describe the setting and data in plain language — who was studied, what records the researchers had, and over what period.]

THE CHALLENGE

[State the core evaluation problem in one bold sentence a skimmer can catch.] [Why seeing the counterfactual directly is impossible, so a stand-in comparison is needed.]

[The naive before/after comparison and why it misleads.]

[The next instinct — comparing against a different group — and the complication it introduces.]

[How the researchers got around it. **Bold the sentence naming the actual comparison they used.** Note what makes it fair.]

[THE FINDING, STATED — E.G. "LOSING A HOME COSTS YEARS OF INCOME, NOT JUST THE REBUILD"]

[State the result, pointing the reader to the figure below. **Bold the headline finding.**]

[SENTENCE-STYLE FIGURE TITLE — WHAT THE CHART SHOWS]

Source: Baylis, Boomhower, Colmer & Voorheis (2026), Fig. 4a.

Note: [Plain-language note: how to read the chart and what to conclude from it.]

IMPLICATIONS FOR POLICY

[Draw out what the result means for policy if it holds more broadly. **Bold the one line worth keeping.** State the stakes soberly — let the facts land, don’t lean on adjectives.]

[Name the limit plainly — one study, one setting — and what it does and doesn’t imply, then restate the real point.]
